

CE #	SUBJECT	DATE ISSUED	VALID UNTIL
CE-SGL-2026-01	Dasho Platform Subscription · Multi-Brand Governance	September 1, 2026	October 31, 2026

Ms. Louie Maranan

Sigil Digital Marketing

Hi Louie,

Here is the cost estimate for Sigil on Dasho, written so your partners can read it without me in the room.

Sigil runs fifteen brands across four subscriptions, and the rules each client's content has to meet live in people's heads rather than in a system. This estimate covers the Dasho platform subscription that holds those rules, measures content against them, and keeps the record of who approved what.

The subscription is **USD 1,000 per month**, covering **15 to 20 brands** and **up to 25 users**, held at that rate for **12 months from signing**. Setup and onboarding is **USD 1,500**, invoiced once on signing.

Pages 2 and 3 set out what the subscription includes. Page 4 sets out what is not included. Page 5 is what we can show you today. Page 6 is the full commercial terms. Page 7 covers onboarding and what we need from your side. Page 8 covers how your data is handled, what happens at the end of the term, and where to countersign.

Rates are in **United States Dollars** and are **exclusive of applicable taxes**. This estimate is valid until **October 31, 2026**.

Questions on this estimate

Reply to either address above. We would rather answer your partners' questions before you sign than after.

SCOPE · PART ONE OF TWO

The part a project tool *does not have*

A project tool tracks whether a post moved from one column to the next. It has no opinion on what the post says. Dasho holds the rules each of your clients' content has to meet, measures content against those rules, and keeps the record of who approved it. That is the layer below, and these six items are it.

INCLUDED	WHAT IT DOES FOR SIGIL
A rulebook per brand	Each client's prohibited topics, risk flags, core messages and approved language, written once on a Brand Card. Rules sit in four named places on screen: Say This, Avoid This, Sound Like This, Proof Points. A risk flag carries its category, so a skincare client reads "FDA: no cures claims" rather than a note in a shared document. Everything below reads from this one page.
A score against that brand's own rules	A caption, article or published URL is scored on five named dimensions: Tone, Audience, Core Message, CTA Alignment and Banned Patterns, banded as Passing, Needs work or At risk. The approve button carries the piece's score in its own label, so the person approving sees the number on the button they press.
Change a rule, and what already exists is re-checked	Editing a rule raises a version number and records exactly what was added and removed, then marks every piece scored under the old rule and re-scores it. When one of your clients changes what they will allow, Sigil finds out the same day which live content now breaks the new rule, rather than hearing it from them.
Find everything failing one named rule	The request list filters on a failing dimension by searching the stored rule results, so "show me every piece failing Banned Patterns on this brand" is a question the system answers rather than a reading job for a person.
A governance score per brand, for the owner view	Open any brand Sigil runs and see how that brand is holding to its own rules, with its weakest dimensions named, next to its benchmark and its trend over time. This is the view to open before deciding which of the fifteen needs attention this week.
The record of who wrote what and who approved it	Every edit kept as a numbered version with the editor named. Where a first draft was machine written, the history records it as machine written rather than as a person's work. When one of your clients asks why a post went out, the answer is on the post rather than in a Viber thread.

SCOPE · PART TWO OF TWO

The workspace and the *rulebooks*

INCLUDED	WHAT IT DOES FOR SIGIL
Per-brand access, approval named per piece	Adding a person requires assigning at least one brand, so nobody lands on all fifteen by accident. Every request names a requestor, an approver, a creator and a reviewer before work starts, and the server refuses an approval from anyone without that role.
Requests, board and briefs	Queued, Ongoing, For Approval and Completed on a board, with list, calendar, drafts and archive views on the same screen. Drop an existing brief into the request window and the form fills itself. Rejecting a piece returns it to Ongoing rather than deleting it.
Bringing existing content in	Content Sigil has already published can be imported and scored in bulk, so the first thing your partners see is where the fifteen brands actually stand rather than an empty workspace.
Philippine beauty rulebook	In place today. Cosmetics and personal care advertising rules, applied by our team during onboarding to the brands Sigil nominates.
Real estate rulebook	Built with Sigil during onboarding, from the advertising rules and approved language Sigil works to today. Included in the setup fee.
Creator campaign governance	Brief external creators inside Dasho and hold what they submit in one review queue, with approval kept by Sigil. Enabled on Sigil's subscription from day one, for the brands that run creators.

Where Dasho sits next to what Sigil already pays for

TOOL TODAY	WHAT THIS ESTIMATE ASSUMES
Monday.com	Dasho carries the brief, the board, the comments and the approvals, so this is the subscription Sigil would look at replacing.
Notion	Brand rules and approved language move onto the Brand Card, where the scoring reads them. Notes that are not brand rules can stay where they are.
Metricool	Stays. Performance analytics and reporting are not in this estimate.
Buffer	Stays. Scheduling and publishing are not in this estimate.

BOUNDARIES

What is *not* included

Listed here so your partners can price the rest of the stack accurately rather than discover it in month two.

NOT INCLUDED	WHAT THAT MEANS IN PRACTICE
Analytics and performance reporting	Dasho reports on whether content holds to its brand rules. It does not report reach, engagement or channel performance. Sigil keeps Metricool.
Scheduling and publishing	Dasho does not post to social channels under this estimate. Sigil keeps Buffer.
Writing or producing content	This is the platform and its onboarding. Producing content for Sigil's clients is a separate engagement and is not quoted here.
Applying a rulebook yourself	Rulebooks are built and applied by our team, during onboarding and afterwards on request. There is no self-serve button for it, and we would rather say so than have you look for one.
One screen showing all fifteen scores side by side	Scores are read one brand at a time. A single portfolio screen across every brand is not in the product today.
A block on publishing	The score tells a reviewer what breaks a rule and records what they decided. It is the reviewer who decides. Blocking a person from approving their own work is available on request and is switched on per organisation.
Legal advice	Dasho is governance infrastructure and a record of what was approved. It is not legal advice and does not replace your client's own sign-off on a claim.

EVIDENCE

What we can *show you*

Dasho is a young platform and we would rather hand your partners something checkable than a page of percentages. Here is what exists.

Live on the platform today

A Philippine skincare and personal care group, six brand lines in an FDA-regulated category, runs its brand governance on Dasho under a twelve month agreement that started in June 2026. Their brand rules, creator briefs and approvals sit in the platform, and their rollout across the remaining lines is still in progress. That is the reference we can offer, and we will say plainly that it is a rollout in progress rather than a finished case study.

What we heard on other calls, in their words

These are from recorded calls in 2026. The speakers are named to us and anonymous here, because we do not put a customer's name in another company's document without asking them first. We would extend Sigil the same courtesy.

WHO	WHAT THEY SAID
Marketing director, Philippine skincare group, June 2026	"Sometimes we fail to see some of the regulatory side of things. So sometimes it's already posted on the platform, and then we'll get flagged that this term should not be used. So we have to take that down and then do a lot of revisions."
Owner, Philippine agency running client brands on Monday.com, January 2026	"We use Monday.com. We have a template for our creative brief. They have to copy the brief, put it on the template, type it in, put in the information one by one."
The same agency owner, on what Dasho is	"It doesn't actually generate the content for you. It's more of like a tool that would pretty much replace your strategists who are the ones checking if you're really on brand."

The check Sigil can run before signing anything

Send us the last ten to fifteen published posts for one of your brands. We run them through the platform and hand you the scored result: which pieces break which of that brand's rules, and what would have been flagged before publishing. There is no cost and no commitment attached to it, and it is the fastest way for your partners to judge this on your own content rather than on ours.

COMMERCIAL TERMS

Rate and *charges*

ITEM	DETAIL	AMOUNT
Dasho platform subscription	15 to 20 brands, up to 25 users. Rate held for 12 months from signing.	USD 1,000 / month
Setup and onboarding	Brand Card build with your team, rulebook applied to the brands you nominate, and platform enablement on calls.	USD 1,500 one time
Month one total	Setup invoiced on signing, plus the first month of subscription.	USD 2,500

TERM	DETAIL
Brands covered	15 to 20
Users	Up to 25
Term at this rate	12 months from signing
Commitment	Monthly, cancellable on 30 days written notice
After month 12	USD 1,250 to USD 1,500 per month
Billing	Subscription monthly in advance. Setup invoiced on signing. Payment within 15 days of invoice.
Adding brands	Sigil adds brands inside the workspace up to the number carried on the subscription. Above twenty we price per additional brand.

Setup and onboarding

Setup is charged at USD 1,500 and invoiced on signing. It covers building your Brand Cards with you, applying the rulebook to the brands you nominate, and getting your team working in the platform. Onboarding is delivered on calls with your team rather than as documentation, and it is priced on that basis.

After month twelve

From month thirteen the subscription moves into a band of USD 1,250 to USD 1,500 per month. Where Sigil sits in that band is set by the number of brands carried and how many of those brands sit in a regulated category. Above twenty brands we price per additional brand.

ONBOARDING

How we *start*

WHEN	WHAT HAPPENS
Week one	We build Brand Cards with your team for your five largest brands, on a call rather than as homework.
Week two	Your team runs live work through those five. We watch the sessions and fix what gets in the way.
Week three	The remaining brands move across, and we agree which of them need a rulebook applied.
Month two onward	A monthly review of governance scores across your portfolio, run with us.

What Sigil provides

FROM YOUR SIDE	WHEN
The list of brands to be onboarded, and which five go first	Before week one
Existing brand guidelines, approved language and anything your clients have already told you not to say	Week one
A named approver per brand	Week one
For the real estate rulebook: the advertising rules and approved wording Sigil works to today	Week two
Attendance from the people who will actually use it, on the onboarding calls	Weeks one to three

To finalise scope we need two answers

- 01 How many of your fifteen brands sit in a regulated category, and which categories those are.
- 02 Who signs off product and service claims on those brands today, Sigil or the brand owner.

Both answers set which rulebooks are applied during onboarding and where Sigil sits in the band after month twelve.

HANDLING AND ACCEPTANCE

Your data, and what happens *at the end*

QUESTION	ANSWER
Who owns the content and the brand rules	Sigil does. Our published terms state that we assert no ownership over what a subscriber puts into the platform, and that the subscriber holds full ownership and all associated intellectual property rights.
Can Dasho reference Sigil or its clients in marketing	Our published terms reserve portfolio and marketing use unless otherwise agreed. If Sigil would rather we name neither Sigil nor any of its clients, we record that in writing at signing and it holds.
Where the data sits	Data is processed on our infrastructure and may be held outside the Philippines. Handling follows our published privacy policy. If Sigil's clients require a specific data processing agreement, send it to us during onboarding and we will answer it before signing.
Governing law	Singapore, under ContentDash PTE LTD.
Ending the subscription	Monthly, on 30 days written notice, at any point including inside the twelve months. Outstanding invoices are settled to the end of the notice period.
Getting your material out	On written request we provide an export of Sigil's Brand Cards, content records and approval history. Ask for it at any point in the term, not only at the end.

Acceptance

Countersign to start onboarding at the rates set out in this estimate.
